

## VELUX® SKYLIGHTS, ROOF WINDOWS & SUN TUNNELS

### Leakproof

Today, as for over 60 years, VELUX® skylights, roof windows and sun tunnels are built to be leakproof. Like water off a duck's back, VELUX® flashing systems are designed to shed water without relying on sealants that can break down over time.

### Quality

- Over the last 60 years, VELUX has been the world leader in the roof window and skylight industry.
- VELUX is the preferred brand for American contractors according to every national survey of building industry professionals.
- VELUX holds more than 300 patents in roof window and skylight design.
- The VELUX Promise. When you decide to use VELUX®

roof windows or skylights, you are assured that their dedication to providing exemplary products and services will not end with the completion of that project. Or the next. They stand behind their products with a promise of lasting service. The warranty covers 20 years on insulated glass seal, 10 years on the skylight, roof window or Sun Tunnel\* and 5 years on blinds, controls and electronics.

### *bringing light to life*

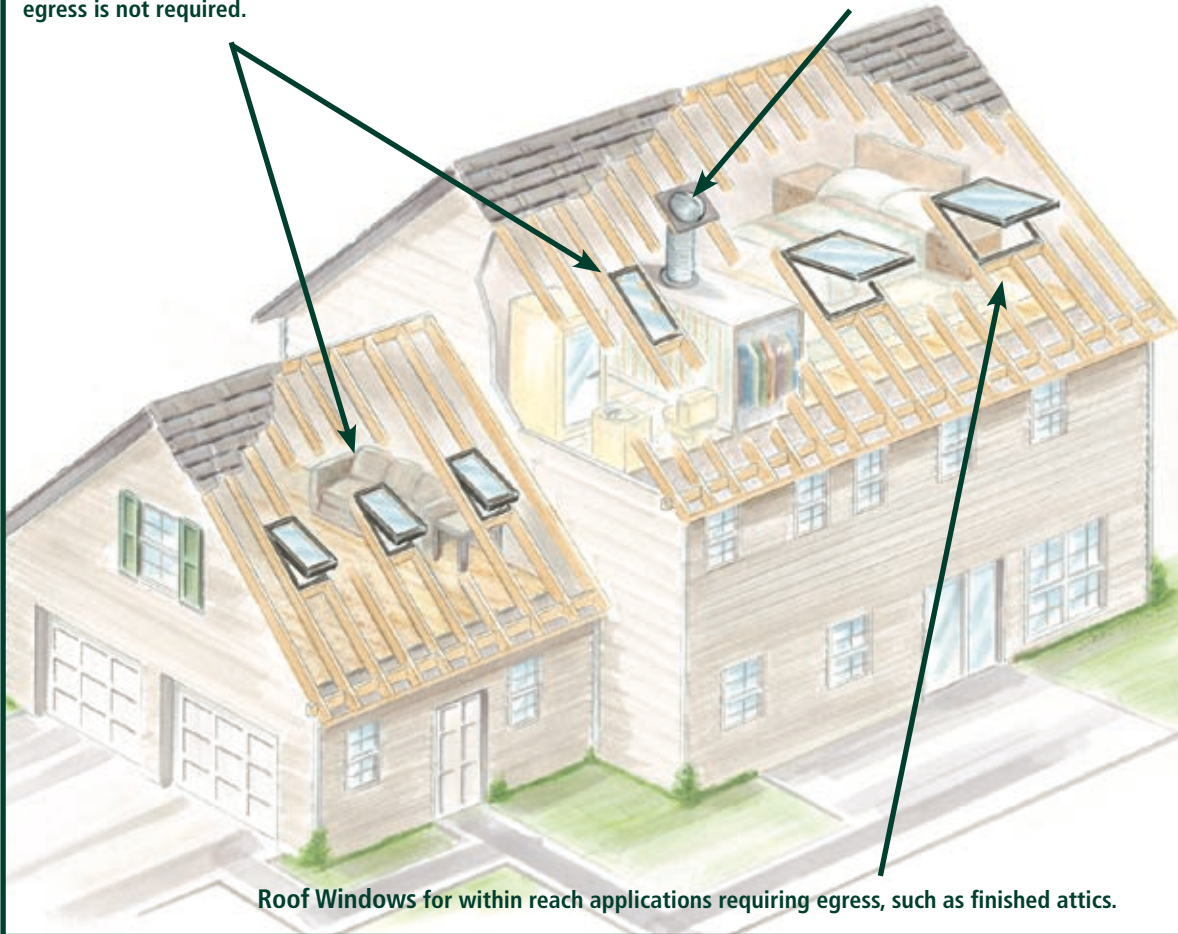

VELUX is a leader in the industry by being the only manufacturer with all standard skylights meeting ENERGY STAR® approval guidelines for all climatic regions of the US. By choosing VELUX, you can promote energy efficiency and save money on utility bills — all while making your home brighter and more comfortable.

VELUX is about how we live today, tomorrow and forever. It adapts to the needs of various family members, seasons, occasions and even the spirit of the moment. Whether it's in the privacy of a master bath or in a social area like the kitchen, VELUX makes you feel more alive.

Skylights for overhead, out-of-reach applications or within reach applications where egress is not required.

Sun Tunnel for when a view to the world is not needed such as closets, laundry rooms, hallways and second baths.

Roof Windows for within reach applications requiring egress, such as finished attics.

## CHOOSING THE CORRECT SKYLIGHT, ROOF WINDOW OR SUN TUNNEL

With VELUX, you have several choices. Before getting started and to help you make the best possible choice for your application, read the following options:

### How To Choose

#### *Electric or Manual Venting Skylight (VSE, QVE or VS, OVM)*

For applications above 15 feet and in rooms needing natural ventilation use the electric venting skylight and electric blinds. For applications out of reach but still in a room that needs natural ventilation and where manual

operation is okay, the manual venting skylight will be the best choice.

#### *Roof Window*

The GPL Roof Window lets you expand or transform upstairs space into beautiful living areas filled with daylight, outdoor views and fresh air. Designed to be installed within reach, such as in attics, above-garage bonus rooms, and loft areas, the GPL opens to provide maximum ventilation.

#### *Sun Tunnels (TMR, TGR, TMF or TGF)*

Perfect where a view outside is not a requirement or a skylight shaft length would be over 4 feet.

#### Select the Correct Size

VELUX has five sizes that fit perfectly between roof trusses. If a wider skylight is required, combine two skylights close together.

VELUX offers seven sizes that are ideal for 16" on-center rafters which can generally be cut to accommodate preferred placement.
